

DevOps

Applications Development and Operation in the future

Préger Lajos 2015.10.30.

The enterprise is under pressure to become more nimble

Trends of a User Centric World with Mobile and Cloud

BUT: Enterprise is struggling to keep up...

The Customer

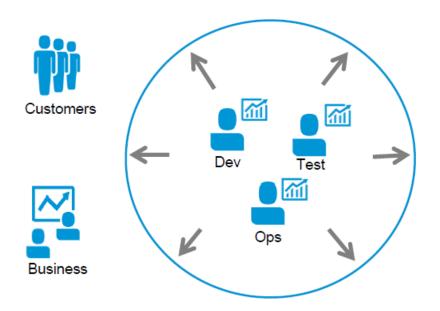

We need to innovate
IT never deliver
faster on time
Our customers are
unhappy

We are struggling to increase pace of delivery (50% projects late)

We are releasing too many defects (20% defects leaked) We cannot risk frequent changes to production (50% releases rollbacked)

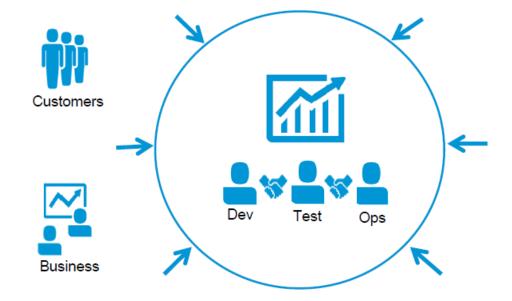

Market trends are forcing a shift in focus

From internal IT perspective to a customer driven perspective

Internal IT driven

- ✓ Reduce cost, defects and incidents
- ✓ Focus on SLA's how many outages, performance and availability

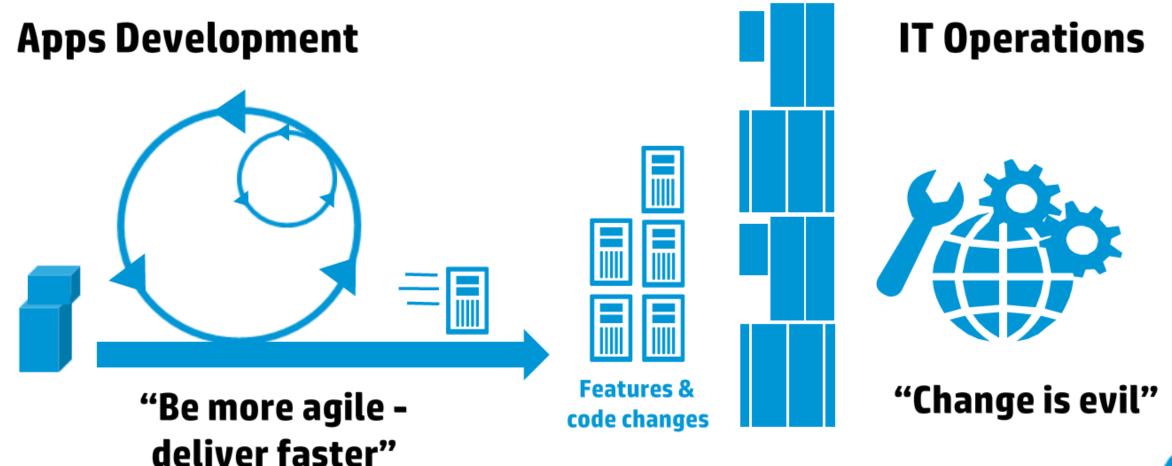

Customer driven

- ✓ Provide positive customer experience
- ✓ Faster and frequent time to market
- ✓ Gain a competitive advantage

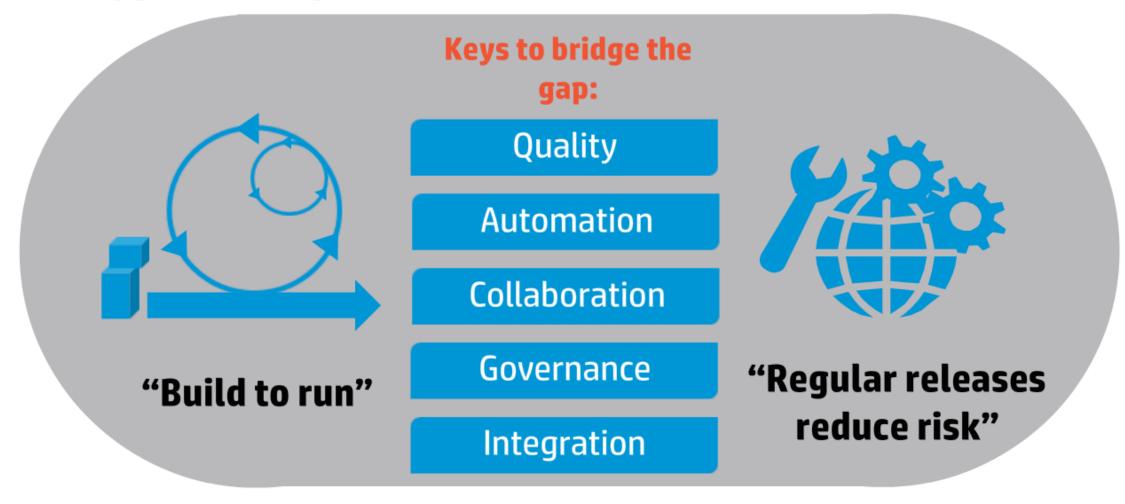

The classic release bottleneck

DevOps Solution Vision

Apps Development

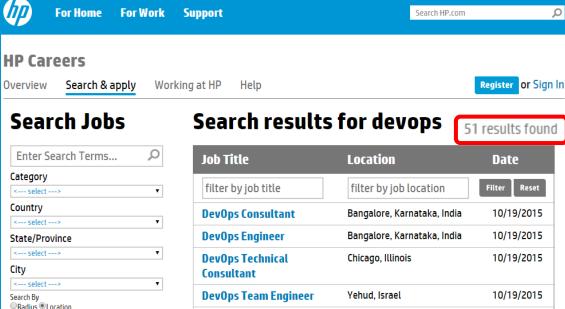

IT Operations

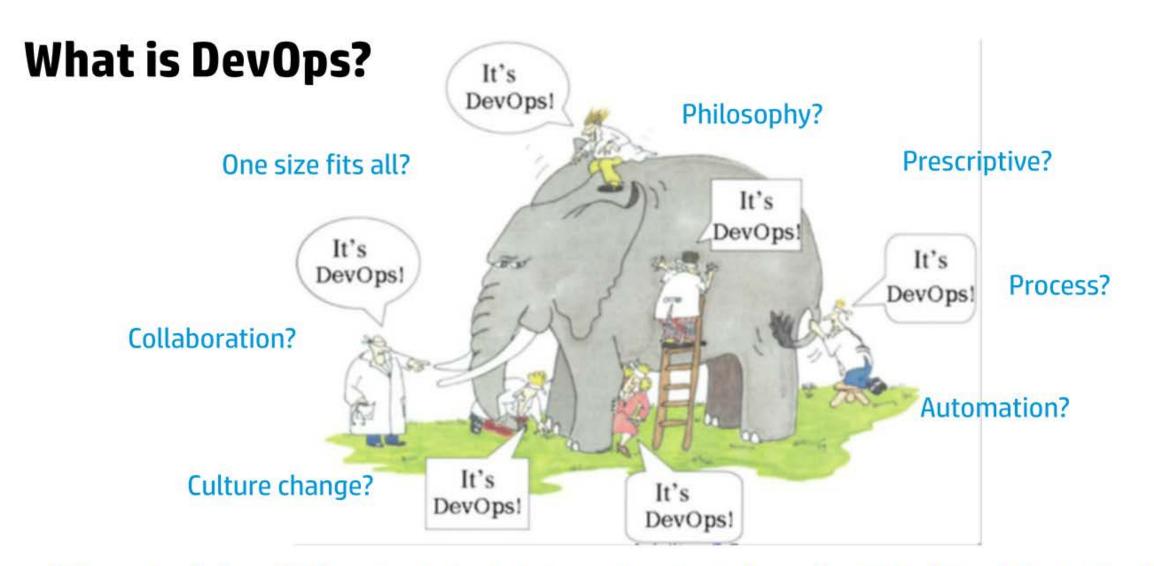

"Gartner says by 2016, DevOps will evolve from a niche to a mainstream strategy employed by 25 percent of global 2000 organizations" Enterprise Services Market/Watch

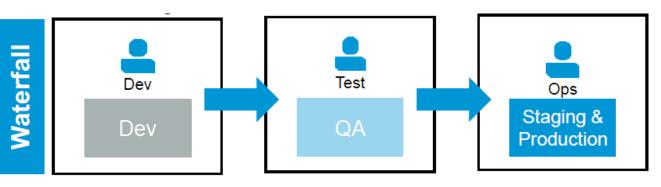

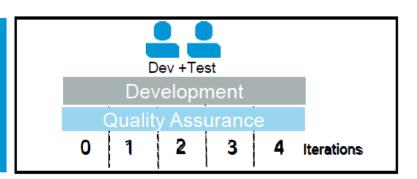

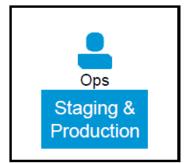

Philosophy, Culture Shift and set of principles and methods (based on Agile & Lean) for better Dev & Ops collaboration to build software that meets business needs faster, cheaper & more reliably

Shift in priorities is demanding DevOps

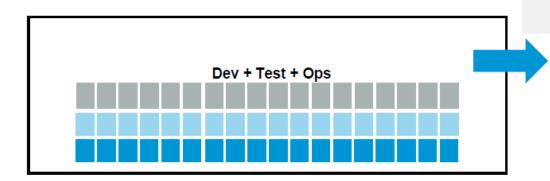

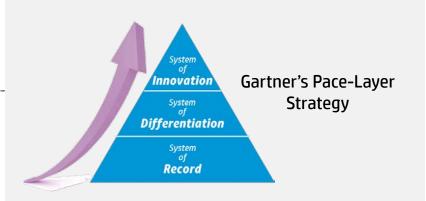

Agile

Enable «System of Innovation»

- «new ideas» rapidly made available
- Pace of Change: very frequent
- ⇒ Frontends; Product Catalog and Order Capture

Make «Differentiation» available

- Functions that provide competitive differentiation
- Pace of Change: frequent, must be configurable
- ⇒ CRM and Fulfilment

Improve execution of «System of Record»

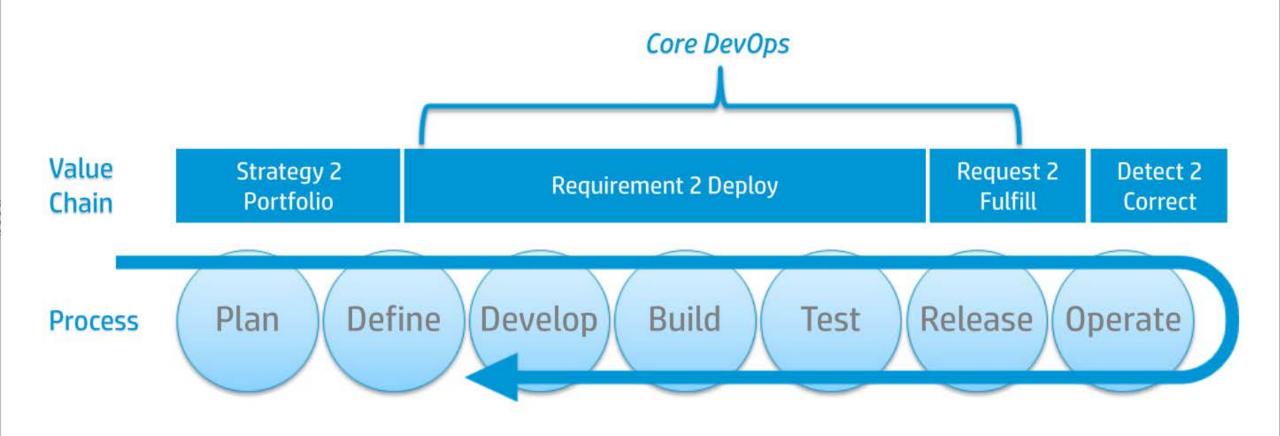

- · Bring back-end to the front-end
- Pace of Change: incremental
- ⇒ Charging, Billing, Invoice/AR

One product team!

- Shared customer-oriented goals
- Shared objectives
- Shared responsibility

DevOps Mapped to IT Value Streams

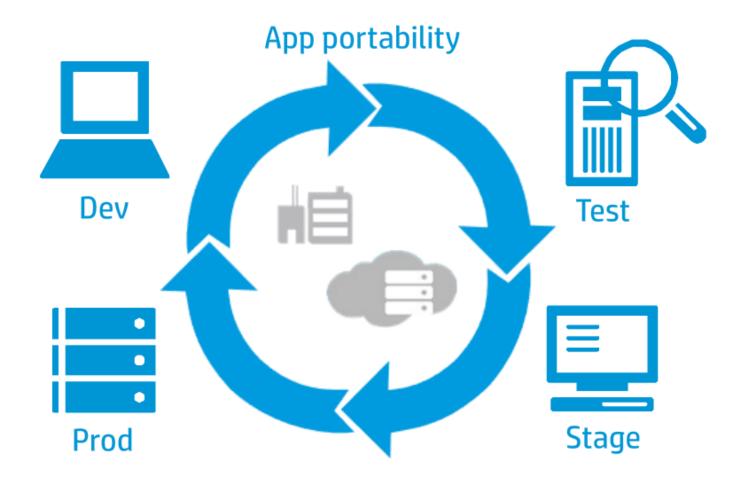

Portability across lifecycle environments

With Portability:

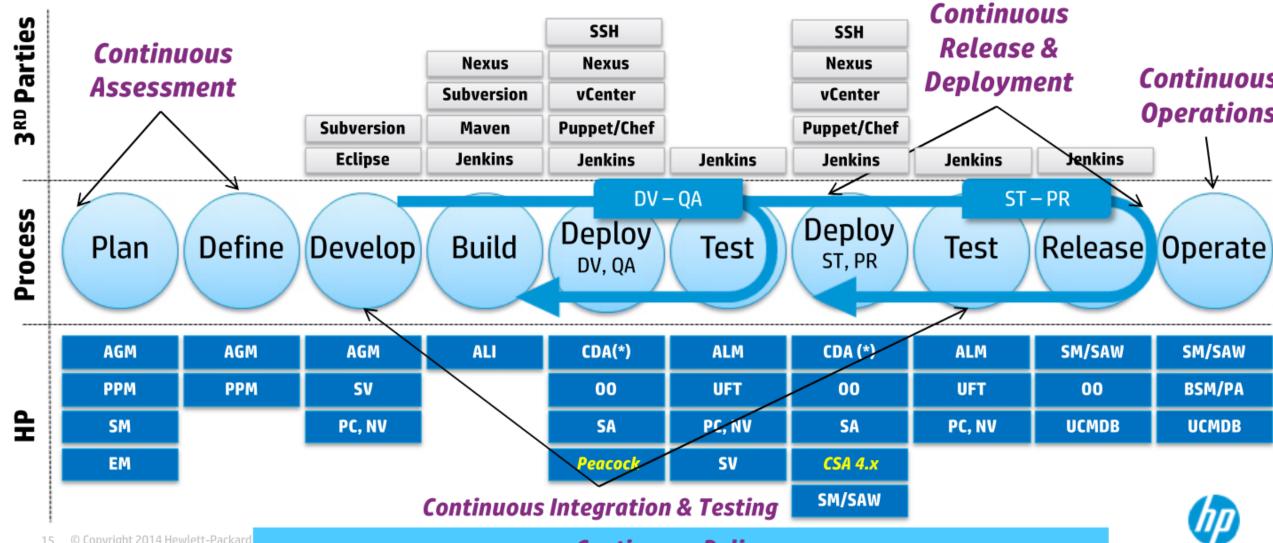

- · Build apps with prod in mind
- Model all environments the same way
- Functionally equivalent, different in scale
- Automatically provision infrastructure as needed
- Deploy in an automated error-proof manner
- Automate change/config management
- Automate hand-offs
- Seamless movement of app from one environment to next
- On-premise, across cloud vendors, or a hybrid
